

Watch Leader FAQs

What devices is the app compatible with?

Any apple iPhone or iPad running iOS11 and any Apple Watch running WatchOS 4 or higher

What instruments is the app compatible with?

The app will automatically discover and read data from any B&G H5000 Processor, B&G Zeus, B&G Vulcan, Simrad NSO & Simrad Go. Because it includes the Simrad range of the Navico products it can be used by powerboaters too!

What data can I see in the app?

Any numerical data. If you can view the data on a display, you can select it from the list of available data types

How do I connect the app to my instruments?

The app uses the phones WiFi. You connect the WiFi to your onboard wireless network which should also be joined to your instruments. Alternatively, if you are using the later generation of B&G/Simrad Multifunction Displays you can connect directly to the device using the integrated WiFi

Won't the app drain my watch battery?

When the watch is lowered and you are no longer looking at it the watch app goes to sleep and stops communicating with the phone. When the watch detects that you have raised your wrist to look at it the watch wakes and the app instantly reconnects.

Why are the colours orange and blue? Can I change them?

We chose the colours to help users that are visually impaired and to make them stand out. We may, in a later version, create the ability to change colours

How can I view more than 2 items of data on my iPhone or iPad?

An in-app purchase will unlock the ability to add as many extra data fields as you require, in whatever layout you desire. You can use a 12" iPad pro to display one very large value, or divide it up into as many sections as you need!

Is the app compatible with Android?

At this moment, no. We took a long look at the products on the market and determined that the Apple phone/watch combination, with its software development kits & API's, made it a very good platform. Whilst we would have to write an identical version of the app in a language that an android phone would understand adding the watch functionality in adds some complications

Is the app compatible with my Garmin Quatix watch?

The app only speaks with Apple Watched due to the software kits & platforms that are available.

Are you in the sailing app development business?

No we are not. Osprey Technical are expert consultants in Marine electronics based in Southampton, UK. The company specialises in navigation & communication systems for Sailing yachts, Race yachts & Super yachts
